SUMMARY & SKILLS

- **Ph.D. in Applied Mathematics & Statistics** | 2 yrs postdoc + 2 yrs biotech startup + 3 yrs wet-lab (synthetic barcoding-based *in vivo* lineage tracing)
- **Skills:** Bayesian optimization, machine learning (deep generative model), data analysis & visualization, Python (NumPy, pandas, Matplotlib, Flet), Git, SQL
- Strong analytical and critical thinking; detail-oriented, highly organized, goal-driven

INDUSTRIAL & ACADEMIC EXPERIENCE

AI Training with Certificates 9/2025-current

Online

- Artificial Intelligence Professional Program (Stanford): XCS236 - Deep Generative Models (Certificate)

Staff Scientist (Computational Biology) 11/2023-8/2025

BacStitch DNA, South San Francisco, CA

- Designed and implemented the company's DNA assembly computational workflow, a modular Python pipeline (web/GUI) to: (1) score sequences by structural features, (2) segment sequences into overlapping blocks that minimizes unfavorable structural features in overlaps, (3) query supplier APIs for block synthesizability and order processing, (4) generate streamlined experimental plans for automated high-throughput assembly.
- Developed a Python pipeline to segment DNA sequences into optimal overlapping blocks that minimizes structural score of the overlaps, under customizable constraints on block count/length, overlap length, and inclusion of specific regions as block or overlap.
- Created Python tools for visualizations, including: (1) Generate figures visualizing BLAST results and DNA structural scores (*Example*). (2) Generate .ab1 files encoding up to four structural scores (as ATGC traces) at single-nucleotide resolution. (3) Make publication-quality figures for research papers and internal documentation.

Postdoctoral Research Fellow 4/2021-10/2023

Department of Genetics, Stanford University, CA

- Developed a Bayesian optimization algorithm and Python pipeline (*FitMut2*) to identify genome-wide adaptive lineages in experimental evolution from fitness phenotype (without WGS), and estimate their fitness effects and occurrence times.
- Developed an optimization algorithm to segment multi-dimensional data (e.g. DNA sequences) into optimal overlapping fragments by minimizing total scores (e.g. undesirable DNA structural features) in overlap regions, under fixed or ranged constraints on fragment count, fragment length, and overlap length.

Artificial Intelligence Fellow 9/2019-10/2019

Insight Data Science, San Francisco, CA

- Developed a deep learning pipeline for portrait editing (a 6-week project), providing continuous adjustment of facial features.

Graduate Researcher 8/2014-12/2020

Laufer Center for Physical and Quantitative Biology, Stony Brook University, NY

- Developed a fitness estimation tool (*Fit-Seq*) that can estimate unbiased fitness for complex cell pools, using a maximum likelihood algorithm.

- Designed and conducted *in vivo* bar-seq experimental yeast evolution (*yeast genetics, cloning, barcoded library construction, lineage-traced evolution, and NGS prep*). Performed computational analysis (*NGS processing, mathematical modeling to infer evolutionary parameters from lineage dynamics, and evolutionary simulations for validation*) to explore the epistasis of adaptive mutations in yeast evolution.

Graduate Researcher ————— **9/2010-6/2013**

Chinese Academy of Sciences, Academy of Mathematics and Systems Science, China

- Established (1) a consensus criterion for second-order multi-agent systems (MASs) with switching topology and communication delays, and (2) a cluster consensus criterion for Boolean MASs with fixed or switching topologies.

EDUCATION

Ph.D., Applied Mathematics and Statistics (Computational Biology) — **8/2013-12/2020**

Stony Brook University, Stony Brook, NY

M.S., Systems Theory ————— **9/2010-7/2013**

University of Chinese Academy of Sciences, Beijing, China

B.S., Mathematics and Applied Mathematics ————— **9/2006-7/2010**

Beijing Normal University, Beijing, China

PRESENTATIONS

Plenary Talk: Fitness Estimation of Pooled Amplicon Sequencing Studies ————— **8/2018**

2018 Yeast Genetics Meeting, Stanford CA, 8/22/2018-8/26/2018
